

## ABSTRACT

A stand device for supporting a personal, miniature, or mobile computer, such as a PC notebook or laptop computer. The stand device is comprised of a base platform (A) for supporting the notebook computer, and at least two hinged legs (B) for elevation and angling of the (A) base and attached computer. The stand device is made from a material such as aluminum to help absorb and dissipate heat away from the computer. The stand device is designed so that it can be attached to the bottom side of the notebook computer with Velcro™ disks. This allows the stand device to be carried, stowed and used while attached to the notebook computer.
